

# Create a video channel with SineSix Cloud

SineSix Cloud allows you to easily create and manage a video network, or “channel”, comprised of LCD video monitors. These monitors can be located anywhere there is an available Internet connection. Each monitor is connected to a SineSix media appliance, AKA the sinePlayer. The sinePlayer supports HD video, images, RSS NewsPages, and there’s even an option for live ATSC TV. The sinePlayer connects to the Internet and supports WIFI or a wired ethernet connection. Media content is managed through an intuitive and user-friendly cloud application, so you can add, update or schedule content from almost anywhere, with ease. Build a media channel for your business, create ad campaigns, entertainment channels, employee communications and more.

## SinePlayer media appliance

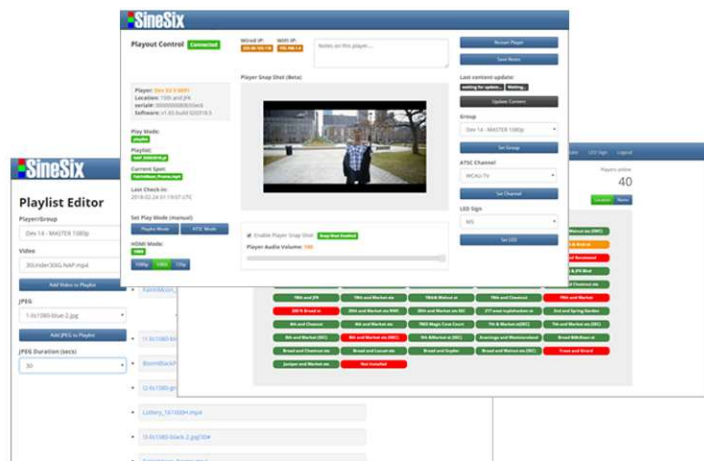

The sinePlayer media appliance is powerful and compact. It features an HDMI video output and can be easily mounted behind the monitor. The sinePlayer works great with 5G/LTE cellular MIFI hotspot/modems, for remote locations without Internet access.

MIFI Hotspot

## SineSix Cloud Portal

With SineSix Cloud, you can easily monitor the status of your sinePlayers in the Player Health Window. Add/update content, create playlists,

schedule content to play immediately or weeks in advance, even generate verification reports to validate content playback.
